You can use Clock Up & Down i.e. clock up & down to change the date & time of your computer by simply pressing the spacebar. The starting date & time for the clock will be set by default to the current date & time. The clock shows the current system time

and date in different languages - the months name is just like the label on the clock and the time is in 24 hour format. The clock can also be used as a customizable calendar. The list and buttons will blink in different colours, as does the start / end date. The list view shows the time in 24 hour format. The date is shown in form of label which can also be clicked to highlight that particular day. The calendar view shows the date in month/day format with short month name. Clicking on that label allows for further editing. You can save the current date and time of your computer in

local machine for future reference by simply saving the data in text files - with or without extension.

The clock displays the current time and date, automatically or after your input. You can use the clock settings to show seconds and milliseconds of the current time or date. When the clock is stopped, it can be started again using the hotkey of your choice.

The clock can be disabled or enabled using the hotkey. Enter your own text data in a text field and save it to a text file with or without extension. With this application, you can type the current date & time of your

computer and it will automatically display the result. Click on the button in the month/day panel to highlight that day. The user can manually enter any data and it will automatically be displayed.

Features - Easy Calendar: You can set the calendar to show the days in a week or month view. In addition to that, you can adjust the font size, format, etc. to create the theme you prefer. In addition to that, you can easily convert the calendar to show only the days of a week or month. -

Easy Clock: Just install this application on your PC and you can instantly set the time or date

to your PC and then be able to see the result instantly. -

Configuration Utility: With this utility, you can easily change the background color, font color, font size, message box color, etc. -

Atomic time synchronizer: Use the synchronization b7e8fdf5c8
